EDUCATION

B.S. Informatics - Minor: **Computer Science**

May 2021

Indiana University, Bloomington, IN

Awards: Academic Honors, Deshpande Schnabel Schl Scholarship (Academic Excellence)

RELEVANT SKILLS

Languages: Java, JavaScript/TypeScript, Python, SQL, Bash

Backend: Spring Boot, Spring Security, Spring Data JPA, Node.js, Express.js

Databases: PostgreSQL, MySQL, MongoDB, Redis

DevOps & Tools: Docker, AWS, GitHub Actions, Jenkins, Linux, Git, Maven

Concepts: REST APIs, Distributed Systems, Caching, CI/CD, OOP, Design Patterns

EXPERIENCE

USIC (Underground Services, Inc.) - Indianapolis, IN

August 2024 - March 2026

Software Applications Analyst

- Designed and executed automated and manual regression/integration test suites for distributed systems, improving release reliability and reducing post-deployment defects.
- Validated Apache Kafka-based event pipelines, ensuring reliable asynchronous communication, accurate event processing, and fault-tolerant message delivery across services.
- Managed configuration consistency across development and production environments to maintain system stability and performance.

Tek Experts - Indianapolis, IN

March 2023 - May 2024

Support Engineer

- Developed SQL queries and Bash automation scripts to streamline data analysis and reduce recurring system errors across enterprise client environments.
- Improved operational reliability by identifying data inconsistencies and implementing corrective database fixes.

Finish Line, Inc - Indianapolis, IN

July 2021 - May 2022

Software Engineer

- Built Spring-based backend REST APIs for the Associate App to deliver accurate, near real-time product location and stock data.
- Optimized API performance with caching and database indexing, reducing response times by 15% and enhancing user experience.
- Implemented customer-facing mobile features in the iOS/Android app, including the JD/Finish Line Exclusive Status membership and other business-driven UI enhancements.

RELEVANT PROJECTS

URL Shortener (ShortLink) | Java, Spring Boot, PostgreSQL, Redis

- Designed and implemented a RESTful URL shortener service with Base62 encoding for collision-resistant short code generation.
- Implemented redirect + analytics tracking (click count, last accessed, referrer/user-agent capture) using an async event pipeline to keep redirects fast under load.
- Optimized redirect performance using indexed database lookups and Redis caching to reduce response latency.

Spring Boot JWT Authentication Service | Java, Spring Boot, MongoDB, JWT

- Built a RESTful authentication service with JWT login, registration, and role-based access control using Spring Security.
- Designed MongoDB schema for users and roles, implementing secure password hashing and input validation.
- Developed with scalability and frontend integration in mind, ready for use in full-stack or microservices applications.
